Profiling Bed Collection

NHS & Healthcare

Merlin *Classic* Profiling Bed

Merlin Profiling Bed

The Merlin Classic Profiling Bed is a design-conscious and functional bed from the Merlin range of profiling beds. The Classic represents a practical, durable and classy looking bed, built with usability in mind.

Adjustable nursing height

The Merlin Classic bed can be raised to a high nursing height of 795mm. This provides an optimum height range for diverse operator sizes and reduces back strain in taller carers.

Profiling mattress platform

The Merlin Classic's profiling mattress platform allows the user to adjust the backrest and knee-break of the base to sit up in bed and elevate their knees or feet.

No hidden costs

The Merlin Classic bed is built with uncompromising quality and is backed with a full 3 Year Warranty that covers both parts and labour. When you choose any Merlin bed there are never any hidden costs.

Trendelenburg (tilt) function

The Merlin Classic's Trendelenburg function enables the caring of users with specialist care needs. The whole bed can be adjusted to tilt both forwards (Anti-Trendelenburg) and backwards (Trendelenburg), which is beneficial for users with respiratory conditions to help improve blood flow.

Ergonomic locking handset

A straightforward, easy-to-operate handset is used to control the Merlin Classic bed. The handset has a locking feature that enables the operator to disable all or just Trendelenburg functions where there are safety concerns with the user.

Profiling Mattress

The Merlin Classic can accommodate mattresses of up to 8" in depth whilst remaining fully compliant with bed rail regulations. This eliminates the need for extension height side rails or copious risk assessments.

Lock-down side rails

The Merlin Classic's full-length wooden side rails can be locked down and out of the way. The lock-down feature is simple to operate, providing a time saving and convenient way of decommissioning side rails.

Merlin LOW Profiling Bed

Trendelenburg (tilt) function

The Merlin Low is an ideal bed for users with specialist care needs, such as those with respiratory conditions. It features a Trendelenburg function which allows the bed to tilt both forwards and backwards, assisting with blood flow and relieving pressure build up.

Merlin Profiling Bed

The Merlin Low Profiling Bed is a lower version of the standard height Merlin Classic, a design-conscious and functional bed from the Merlin range of profiling beds.

Low height safety

The Merlin Low bed can be lowered to just 220mm from the floor, greatly reducing the risk of impact injury from falls. When coupled with floor safety mats, the risk of injury is removed almost entirely.

Profiling mattress platform

The Merlin Low bed allows users to adjust their back and leg rests as and when they desire. This enables users with the ability to sit up in their beds or to raise their knees, legs and feet at the push of a button.

No hidden costs

The Merlin Low bed is built with uncompromising quality and is backed with a full 3 Year Warranty that covers both parts and labour. When you choose any Merlin bed there are never any hidden costs.

Ergonomic locking handset

A straightforward, easy-to-operate handset is used to control the Merlin Low bed. The handset has a locking feature that enables the operator to disable all or just Trendelenburg functions where there are safety concerns with the user.

Profiling Mattress

The Merlin Low can accommodate mattresses of up to 8" in depth whilst remaining fully compliant with bed rail regulations. This eliminates the need for extension height side rails or copious risk assessments.

Lock-down side rails

The Merlin Low full-length wooden side rails can be locked down and out of the way. The lock-down feature is simple to operate, providing a time saving and convenient way of decommissioning side rails.

Merlin *Pressure care* Mattresses

Merlin Profiling Bed

The Merlin mattress is designed for use within the NHS & healthcare. The Merlin is a fully profiling mattress with foam castellations on both sides of the foam. The Merlin also offers 4-way turn, designed to prolong the life of the mattress.

Vapour permeability

The presence of moisture is known as a subjective indicator of pressure ulcer development. Two-way stretch mattress covers with vapour-permeability allow for better microclimate control, thereby reducing moisture presence.

Pressure relieving CMHR foam

The Merlin is constructed from single grade CMHR foam which provides a soft lying surface for the user. The foam is castellated on both sides to ease profiling and variable size nodes enhance pressure relief.

Wipe-clean nylon PU cover

The Merlin has a PU coated cover made from a 2-way stretch, vapour-permeable knitted nylon. The water resistant cover has sewn seams and zip closure on three sides for foam access.

Audit box

With the high importance of mattress audits highlighted by the CQC The Merlin mattress has an audit box printed on the cover to assist care operators in carrying out the recommended annual audits.
